Presentation of the school, academic program or area:

The School of Economic and Administrative Sciences is composed of six undergraduate academic programs, as well as International Business Administration, Financial Management and Public Accounting, each with high quality accreditation, in addition to Business Administration, Economics and Marketing. Also part of the program is an Entrepreneurship unit to strengthen the entrepreneurial spirit, and the Center of Training and Business Development, which manages the relationships with external factors, the public and businesses.

Faculty activities revolve around the mission of the university and the development of skills such as entrepreneurship, which is understood as the creation of new companies, or the modification of existing ones through innovative processes that create added value. The strategic management of companies, from the ability to optimize and efficiently use resources, to establishing techniques and processes of negotiation, is necessary in order to achieve the objectives proposed by the senior management and leadership in regional development process. Professors will be able to propose, direct, and execute projects and actions that contribute to the solution of socio-economic problems of the region.

The Economics Program began in 1994, as a response to the need to train economists who promote regional development, and growing awareness of the importance that the Economics Program contributes the Faculty of Economic and Administrative Sciences.

The graduate economics program is characterized by being a professional, with a high level of disciplinary training, supported with quantitative tools and clear principles on administrative and financial matters. Leadership and management in development processes must be based on permanent innovation.

The Economics Program has the following key areas of training: economic theory, history and epistemology, statistics and econometrics, area management and projects, among others.

The Economics Program is in the process of strengthening research and globalization, and the program develops permanent display strategies, which should result in a better chance of sustainability.
